

# Larinier Board

**Berry & Escott** have manufactured another cute solution to the worldwide problem of barriers to upstream migrating fish.

This Super-Active Baffle passage system conforms to the strict proportions laid down by the original developer and recommended by The Environment Agency in its Fish Pass Manual.

## Advantages

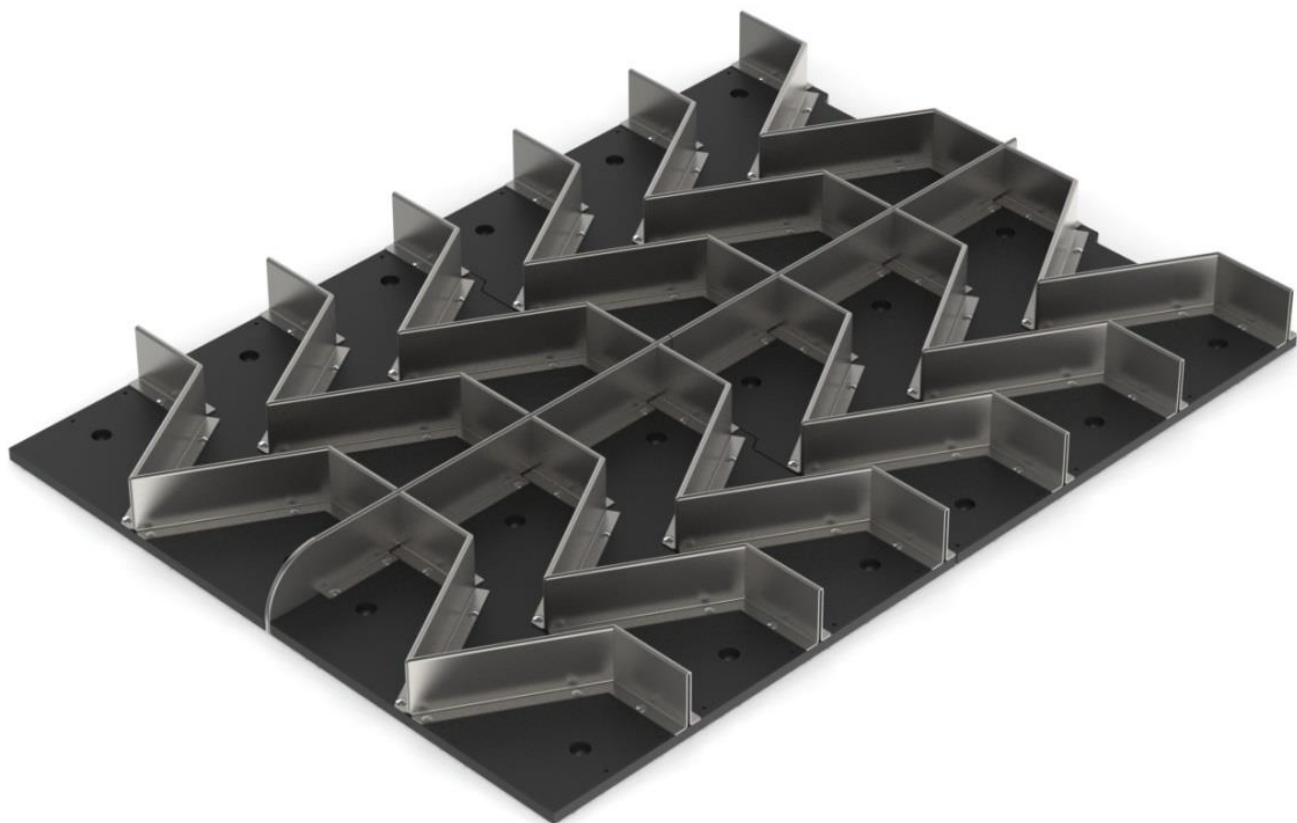

The composite Larinier Board is a Hi-Tec solution that has several advantages:

- Offers superior construction utilising stainless steel baffles & H.D.P.E back boards.
- Baffles have been designed with hollow sections reducing material usage & thus environmental impact.
- Extremely robust & tested to withstand high debris & hydrodynamic loads.
- Economical solution with a short lead time.
- Can be quickly & easily installed

## Where and how will I use them?

Larinier passes work by creating favourable flow conditions and are a proven solution for enabling migration of Salmon, Trout, Grayling & Coarse fish. Juxtaposing multiple boards allows site specific configurations to be installed to maximise pass efficiency.

Applications for the Larinier board are: river weirs, technical structures & bespoke fish passes.

## How much do they cost?

A detailed breakdown of costs can be found on our website

[www.berryescott.co.uk](http://www.berryescott.co.uk)

Prices range from  
£260 - £335 + VAT ea per Board  
(Depending on quantity  
& type bought)
